# 3 innovative advantages of 1EA packaging

COMPARED TO THE OLD GENERATION PACKAGING

1EA packaging is produced with an innovative patented technology. It provides significant advantages as compared to all known to us eco-packaging analogues

## SECURE LID LATCHING

A lid is securely latched thanks to tray's rigid sides and flanges that are firmly fixed in the corners

- A lid can be latched with one hand, in just a second!
- Trays are protected from deflection and therefore remain securely closed at any movement

## 100% FORMED RIM

No folding required - 1EA trays can be used right upon delivery!

- No need to fold flanges - save your company's time & resources
- No instructions - simple for any user!
- No torn flanges = no damaged goods

## LEAKAGE & STAIN PROOF

Internal valve soldering and no slits on the rims = no wet or greasy stains!

- No greasy or wet stains thanks to the absence of rim slits
- Internal valve soldering protects trays from stains in the corners and gives a stylish look

# 1EA benefits

Research and production company 1EArth (One Earth) provides cutting-edge engineering, manufacturing and environmental solutions

## 1EA Patented Innovative Technology

The 1EA research team has created a fundamentally new technology for the production of environmentally friendly packaging, which has no analogues. Our design is patented and used exclusively for 1EA products. This is truly a new generation of sustainable packaging

## All products are certified

1EA food packaging received all necessary certifications to ensure safety and quality compliance

## Cardboard packaging from renewable resources

The 1EA trays are made from renewable plant materials that are FSC certified. Eco-friendly 1EA packaging can return back to nature

## Sustainability

Recycled plastic is used for the production of 1EA lids. It is marked with a recycle icon - it means it is plastic that has not become garbage and, thanks to our and your efforts, will not become it in the future

## Unique design

The unique, unparalleled design of eco-friendly food packaging with a formed rim will make your product look special and will easily distinguish it from its competitors

## Suitable for hot products

Ideal for the delivery and storage of hot foods (lids should not be exposed to heat above 70 ° C)

## Suitable for microwave oven

100% microwave safe (with no plastic lid on)

## Retains liquid and fat

Resistant to moisture and grease due to our special coating, tray & rim design

## May replace dishes

1EA packaging can be temporarily used instead of tableware, as it is durable enough for cutlery
